

From potential to performance by design

TCS AI for Business Study

Healthcare Report

About the TCS AI for Business Study

TCS surveyed senior executives at almost 1,300 companies in 12 sectors across 24 countries, approximately half of which had annual revenues over **US\$5 billion**.

This report includes study findings from **80 survey respondents** in the **Healthcare** industry, including from 49 provider and 31 payor companies

What's driving AI implementations?

How are employees, skills and roles shifting?

How is AI redefining the Healthcare industry?

What customer engagement AI trends are emerging?

Where is AI strategy headed in Healthcare?

Are business results aligning with aspirations?

The findings in this report reflect a survey sample of 80 senior executives — CEOs, divisional and business unit heads, and senior VPs or VPs with profit-and-loss responsibility — working for major Healthcare companies headquartered in the following countries:

- Australia
- Belgium
- Canada
- Chile
- Denmark
- Finland
- France
- Germany
- India
- Ireland
- Japan
- Mexico
- New Zealand
- Norway
- Spain
- Sweden
- UK
- USA

Additionally, seeking to find correlations between a company's business success and its approach to implementing artificial intelligence, each executive's company was ranked alongside the others in that same industry for its financial success, as measured by a combination of revenue growth and profit growth over the last three years.

These **“Pacesetters”** represent the top 28% of companies — 22 companies – among the Healthcare executives we surveyed.

Where relevant, this report notes differences between the industry's overall survey answers and the responses of its Pacesetters.

The transformative potential of AI

An optimistic outlook on AI's impact

Few technology advancements have gripped the public imagination like artificial intelligence. The majority of senior executives in the Healthcare industry believe **AI's impact on their business model will be greater or equal to earlier disruptive technologies, and they're optimistic about its potential.**

believe the impact of AI will be greater than or equal to **the internet**

believe the impact of AI will be greater than or equal to **smartphones**

say they are **optimistic or excited about AI's potential impact** on their business

Q. How would you compare AI's potential impact on your business model with the following technological developments: Internet; smartphone.

Q. Which of the following is closest to how you're feeling about AI's potential impact on your business?

Humans, not AI, expected to remain the competitive differentiator

Most Healthcare executives believe that rather than replacing human workers, AI will augment and enhance human capabilities, enabling people to focus on higher-value activities that require creativity, empathy, and strategic thinking.

More than two-thirds of Healthcare executives say human creativity or strategic thinking will remain their company's competitive advantage.

40%

expect AI to make more tactical decisions, freeing up workers to think more strategically

29%

believe human intuition and creativity will remain central to their company's competitiveness

Q. In your business, which of these statements most closely matches your own expectations for how AI will impact decision making in the next 3-5 years?

Executives want to innovate and make money with AI

The Healthcare industry is more focused on using AI to spur innovation and grow revenue than are most other industries. On a 10-point scale between “optimization” and “innovation,” Healthcare executives averaged 7.03, compared to an average of 6.70 for all other industries.

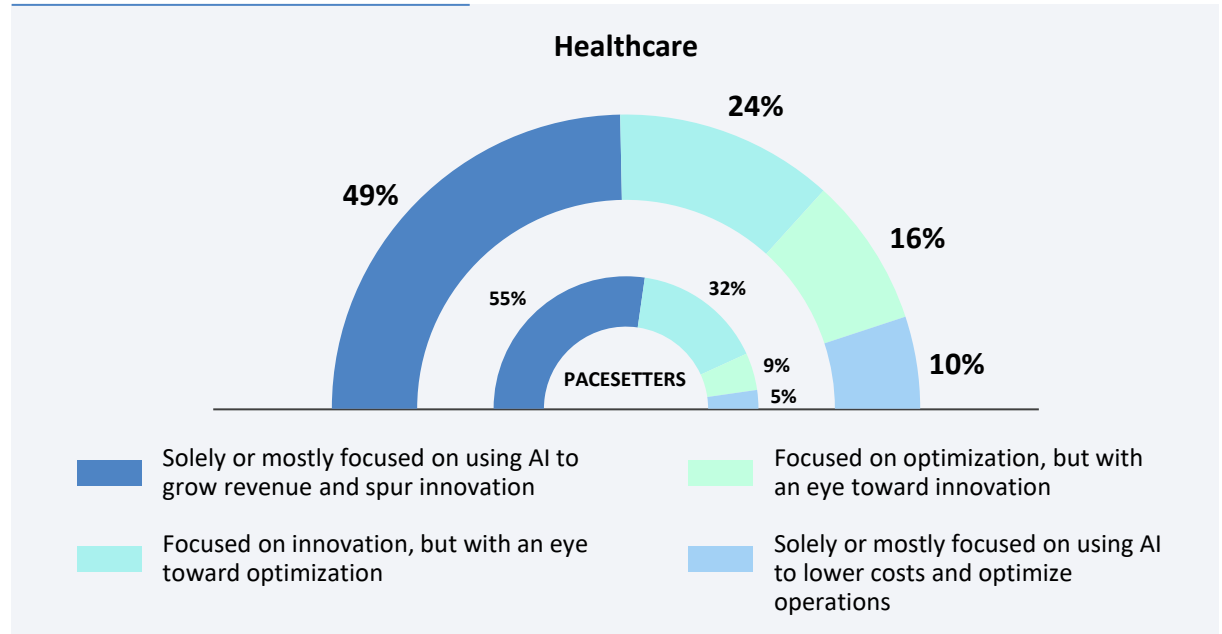

Healthcare Pacesetter firms are firmly in the camp of using AI to focus on innovation and revenue growth.

of respondents at Pacesetter organizations said they were primarily focused on innovation

said they were more interested in using AI to cut costs

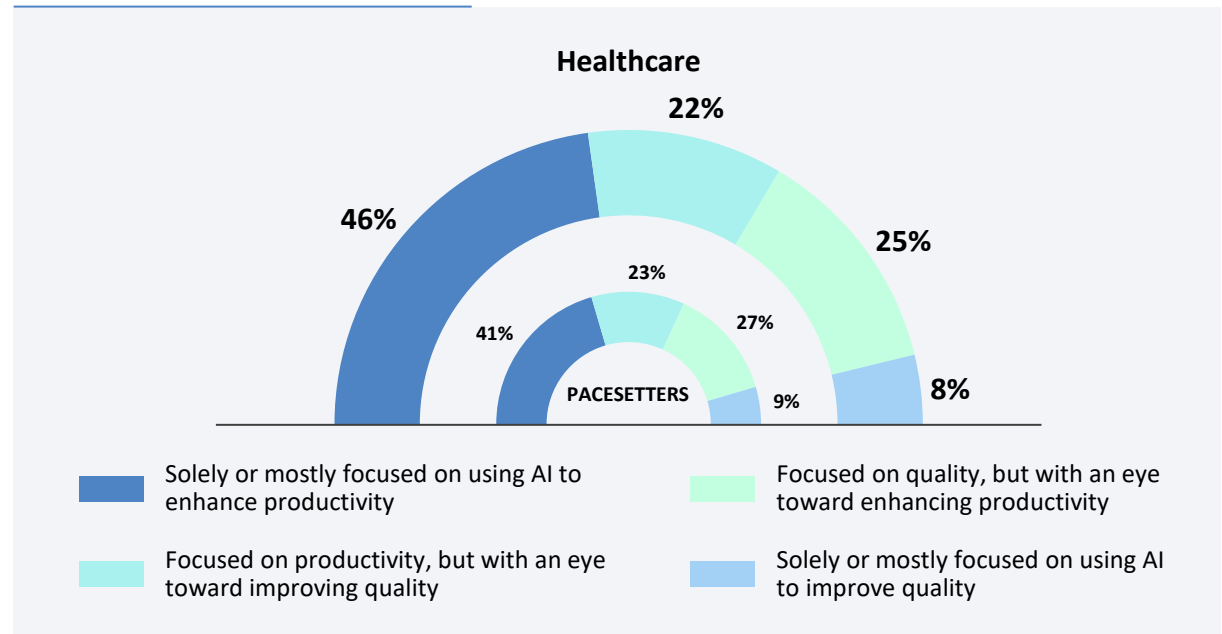

Q. On a scale of 1 to 10 — where 1 is solely interested in using AI to lower costs and optimize operations and 10 is solely focused on spurring innovation and revenue growth — where would your company's current approach toward AI fall?

Productivity is an AI benefit, but quality will be its lasting value

Other industries (where declines in quality have less adverse results) tend to give more emphasis to enhancing productivity with AI than on improving quality. But over time, the more balanced the approach to integrating AI – through optimization, productivity, innovation and quality – the better the outcomes and the elevation to excellence.

On a 10-point scale between “improving quality” and “enhancing productivity,” Healthcare executives scored an average of 6.78, compared to the 6.91 average across other industries.

Healthcare Pacesetters were even more focused on improving quality with AI, scoring 6.41.

QQ. On a scale of 1 to 10 — where 1 is solely focused on using AI to improve quality and 10 is solely focused on using AI to enhance productivity — where would your company's current approach toward AI fall?

Personalized interactions are top AI customer focus areas

When it comes to customer engagement, organizations say they're moving beyond commonplace chatbots. While chatbots for sales and product support remain important to Healthcare companies, their use is being supplanted by other AI-driven means to accomplishing these goals.

Q. In what ways are you exploring AI's impact on your relationships with customers?

The journey to AI

One size fits one? AI adoption strategies vary

AI is not plug-and-play technology with a one-size-fits-all strategy, and the findings from Healthcare executives reflect their varied approaches to AI. Over a quarter favor establishing an enterprise-wide AI strategy – but nearly as many are willing to wait and see how other Healthcare companies use AI and follow their lead.

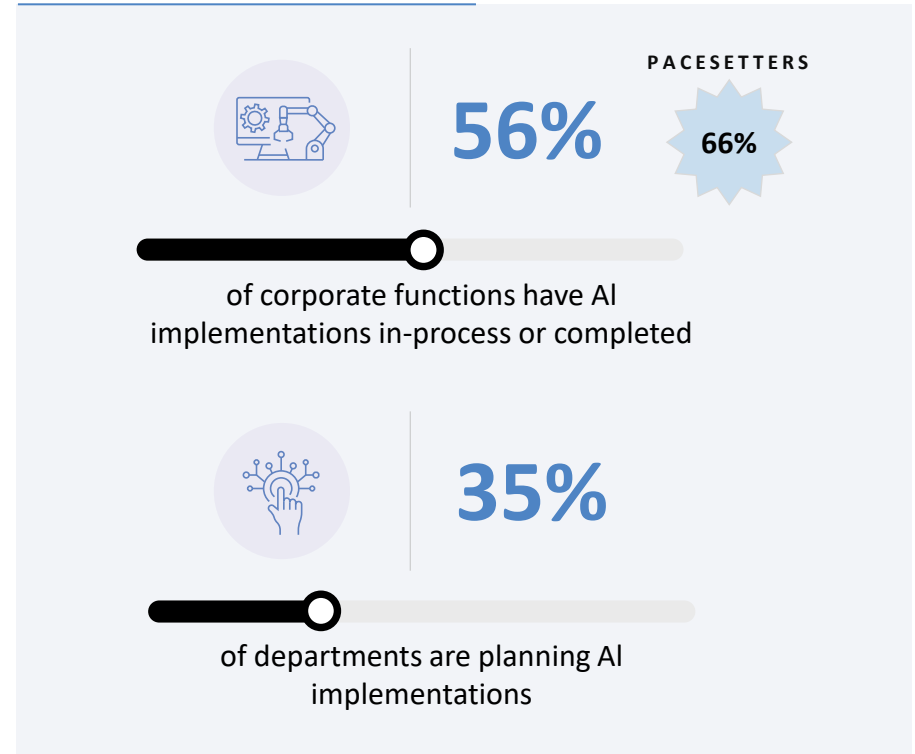

Q. Rank three areas in order of importance to your company's leadership regarding the use of AI in the enterprise.

Fast or slow, Healthcare organizations are adopting AI

While the pace of AI adoption differs, the ultimate objective is overwhelmingly consistent.

The vast majority of Healthcare executives (91%) have AI implementations planned, in process or already completed.

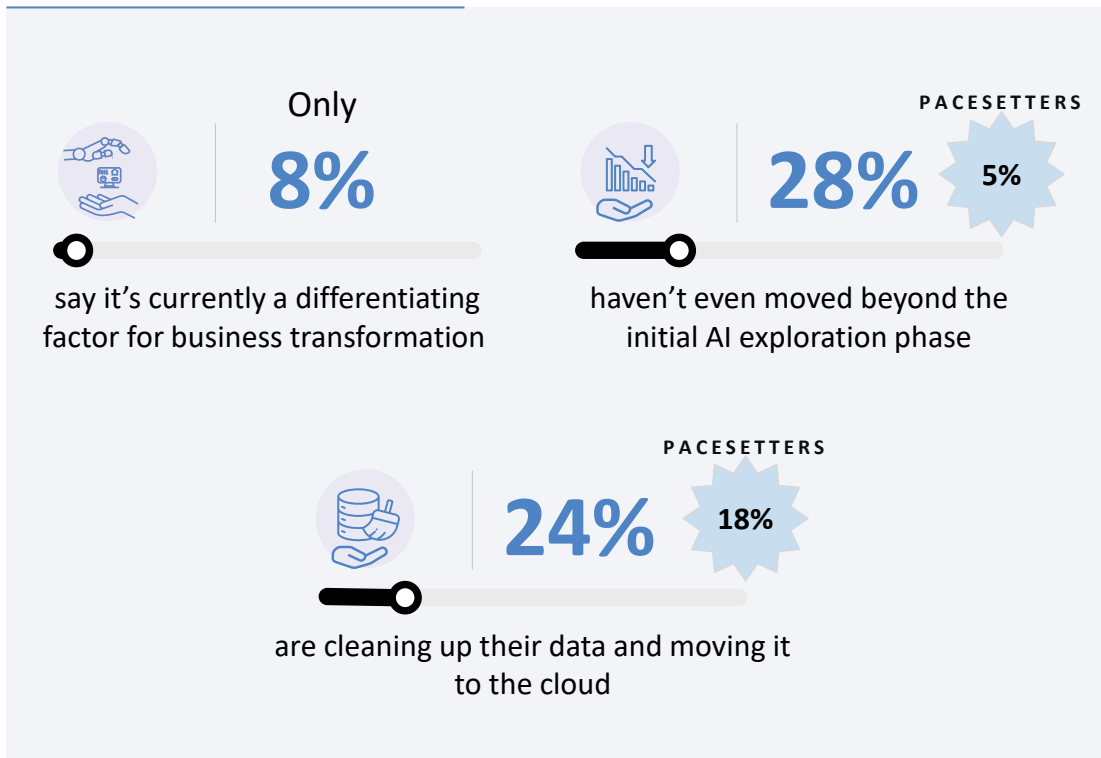

Q. What is the state of implementation for AI-enabled operations in the following areas of your company?

A gap between aspiration and reality

The merging of reasoning and recognition intelligence into generative models offers tremendous potential to help companies reimagine entire value chains and transform the way they do business.

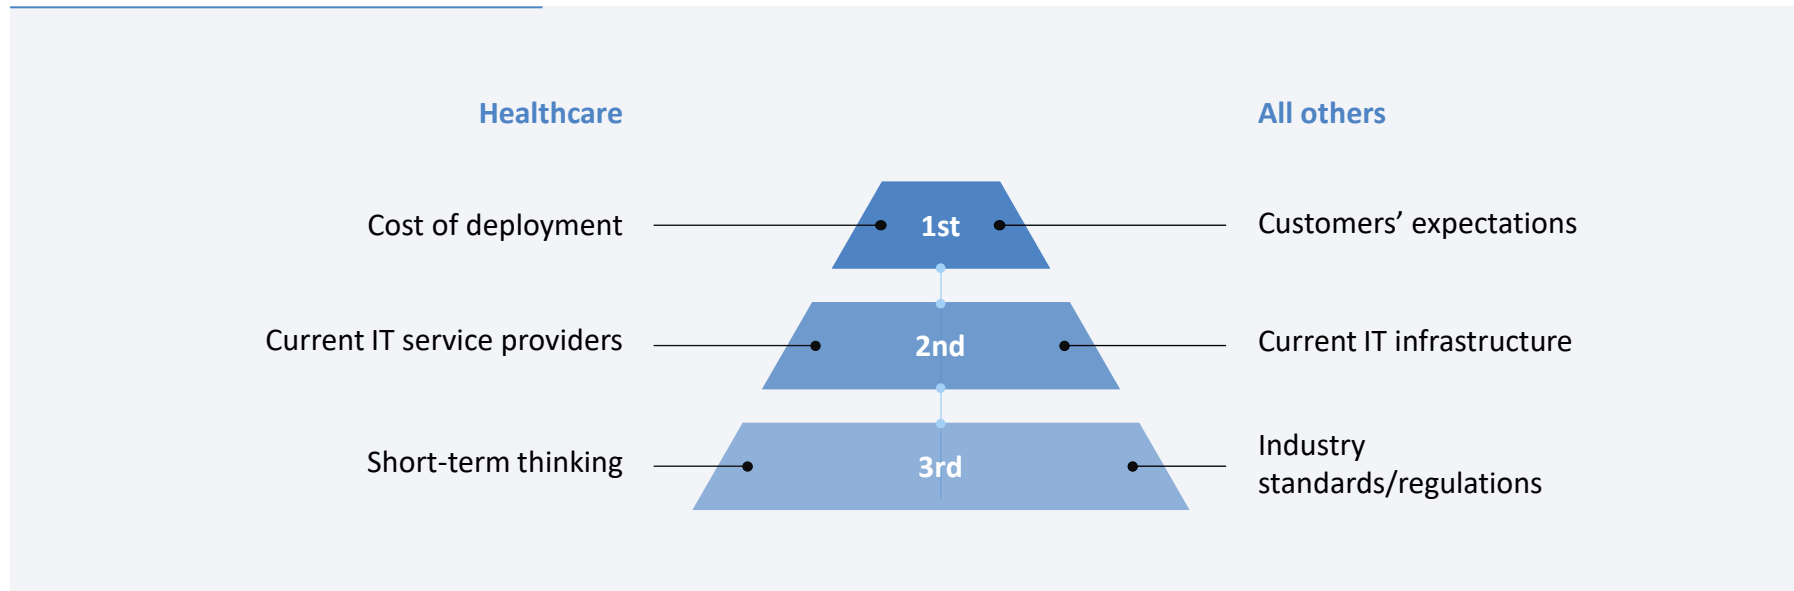

But most Healthcare respondents say they have a long way to go to realize these outcomes.

Q. Looking at your organization overall, which most closely describes your company's current relationship to AI?

What's hampering AI progress?

Healthcare executives say the **cost of deployment**, their **current IT service providers**, and **short-term thinking** are slowing their overall AI efforts.

Q. What are the top 3 challenges to making effective use of AI in your company?

Generative AI brings its own set of challenges

51% of Healthcare executives surveyed expect up to half of their employees to be using GenAI on a daily basis within the next 3 years. Of issues that GenAI has brought to the fore, Healthcare executives say security and privacy concern them the most.

Q. In three years, what percentage of your employees do you believe will be using/interacting with Generative AI capabilities on a daily basis?

Q. Rank the top 3 statements, which most closely reflect how recent attention to Generative AI (specifically) has changed your company's assessment of AI's benefits and risks more generally

**Balancing risk with
opportunity**

Making way for AI

Introducing such powerful technology into organizations comes with a great weight of responsibility. Extensive preparation and stringent governance that foster trust in outcomes and investment values must go hand in hand with AI adoption.

Healthcare businesses are not only aware of the changes involved, but actively planning for them.

PACESETTERS

86%

of Healthcare companies are currently reworking or are planning to rework how they operate across the enterprise

Q. Have you given any thought to how your company's strategic direction needs to be revised due to AI's potential benefits or risks for your organization or your industry?

Homegrown implementation prevails for now

As AI preparation turns to implementation, organizations face numerous decisions to achieve the right mix of artificial intelligence and investment.

Despite the complexity, **over half of Healthcare companies are likely to rely on internal teams** to develop and implement AI — even for tasks as difficult as creating their own enterprise-specific large language models (LLMs).

PACESETTERS

50%

say they are relying solely or mostly on in-house talent to implement this new technology

plan to create their own enterprise-specific LLMs for use in GenAI implementations

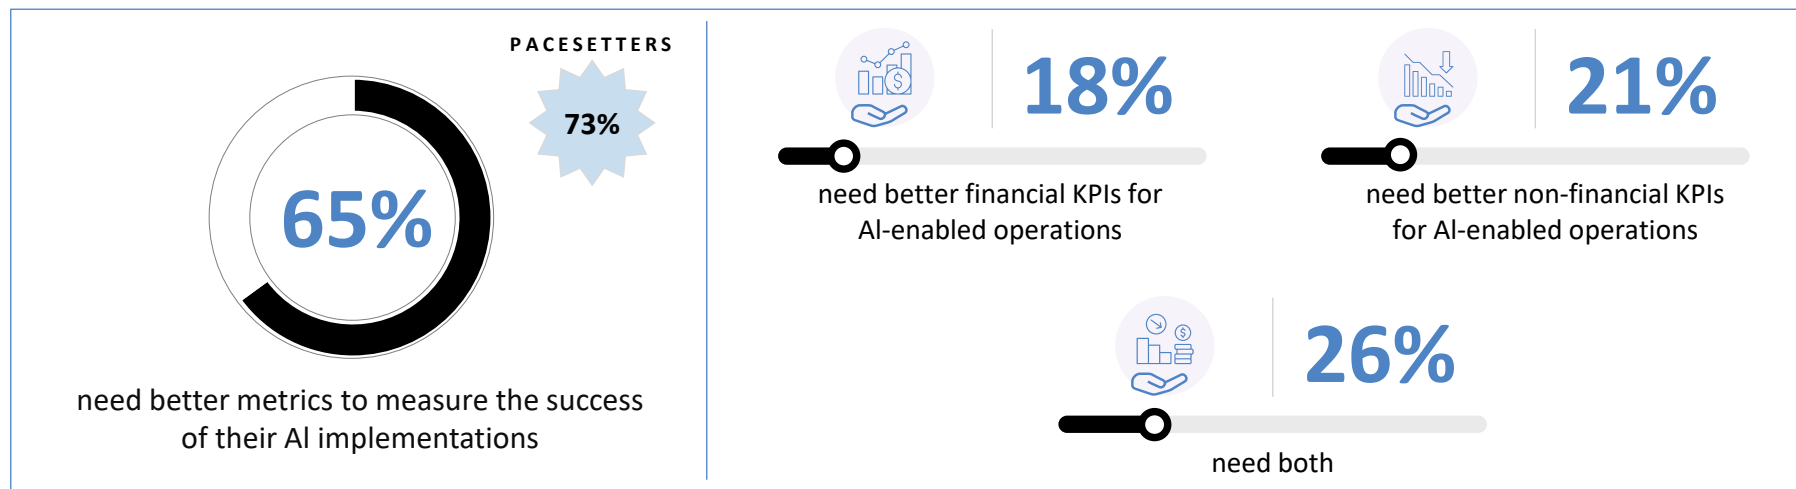

Q. On a scale of 1 to 5, how much are you relying on external vendor and partnerships (including academic or government partners) for your AI implementations and how much are you doing in-house?; Q. Are you planning to create your own enterprise-specific LLMs for use in Generative AI implementations?

Implementation metrics fall short

Healthcare executives say they need better KPIs to measure the success of their AI implementations. Without KPIs, organizations will struggle to demonstrate AI's value and gain internal traction for its adoption.

Only **23%** say they have “good enough” metrics and KPIs for their current stage of AI deployment.

13% said they aren't even aware of any useful metrics for AI implementations.

Q. Which statement most closely matches how you feel about measuring the success of and financial return on AI implementations?

Navigating ethical, security and privacy dimensions

The debut of sophisticated AI applications has intensified the focus on security and privacy concerns, and the ethical dimensions of AI use have also garnered significant attention. Most senior Healthcare executives prefer global standards, debating whether specific use cases are better covered at this scale or more locally.

44% prefer global AI standards regulating specific use cases and outcomes

38% prefer global AI standards, plus specific regional controls

18% prefer a heterogeneous environment of local regulations

1% think it's too early or unnecessary to regulate AI

Q. Which regulatory landscape is most appropriate for your business's use of AI?

A regulatory partnership between industry and government

More Healthcare executives think regulations should be established by governments than by their own industry. Close to half also think academic expertise deserves a seat at the table given how complex this technology already is and how quickly it is evolving.

64%

Government

49%

Industry

48%

Academia

18%

NGOs

Q. Which organizations should be involved in establishing regulations about AI?

TCS recommendations

Based on this research, here are our recommended next steps.

Focus on the business value, not the technology

Embrace an AI strategy based on prioritized initiatives and use cases that have the potential to drive tangible business outcomes.

Make your business & culture AI-ready

Invest not only in the necessary technology and infrastructure but in a culture that embraces change, experimentation, and continuous learning.

Adopt a more strategic approach

Consider the broader strategic value of AI initiatives and how they can be used to improve operational efficiency, reduce risk, and enhance decision-making — all of which can contribute to overall business performance.

Don't go it alone

Let business and IT staffs focus on core competencies and strategic objectives, seeking partnerships and external expertise where appropriate, rather than shouldering the entire burden of AI implementation internally.

Plan for success, not scarcity

Implement AI with the goals of expanding revenue, opportunity, and innovation, which offers the potential to create new jobs and enhance human capabilities.

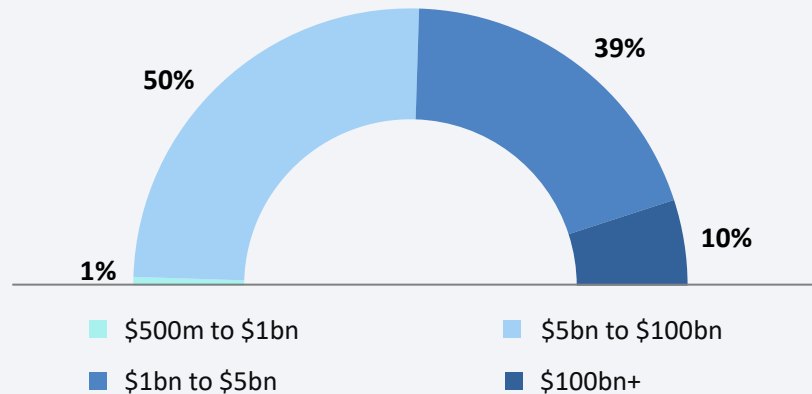

Create higher-level relationships with customers

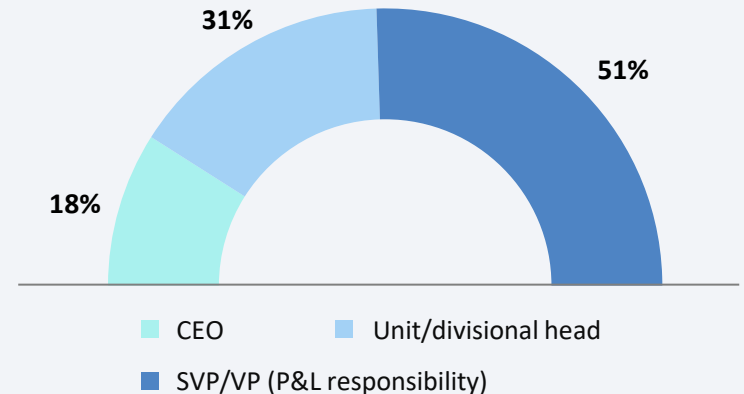

Leverage more modern AI to deliver highly personalized, proactive and more value-added experiences across the customer journey for competitive differentiation and to build long-term loyalty.

The TCS AI for Business Study explores how companies around the world are looking at the strategic implications of AI technologies and how they are responding to its transformative potential. A survey of 1,272 senior executives with profit-and-loss responsibility at their companies was conducted November 28, 2023, through January 17, 2024, with responses from 24 countries across 12 industries, exploring the strategic implications of artificial intelligence and their expected impact on large, for-profit enterprises.

Some data presented will not add up to one hundred percent due to rounding, and not every answer is included in the findings reported.

About the Thought Leadership Institute

Since 2009, the TCS Thought Leadership Institute has initiated conversations by and for executives to advance the purpose-driven enterprise. Through primary research, we deliver forward-looking and practical insights around key business issues to help organizations achieve long-term, sustainable growth.
